Documentation of Webframe

Version: 1.0 from 1.Jan 2018

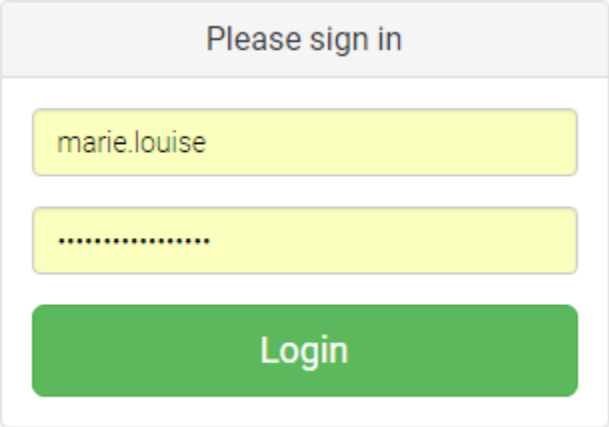
1. Setup Environment

- Java 8
- Tomcat 8
- Eclipse IDE
- The following needs to be added to Tomcat VM arguments:

  -Dsvnkitint.remote.url="SVN_LOCATION"
  i.e -Dsvnkitint.remote.url="https://svn.riouxsvn.com/webframe/trunk/xmpl/"

  "svnkitint.remote.url" is the SVN location where files should be committed to

2. Authentication

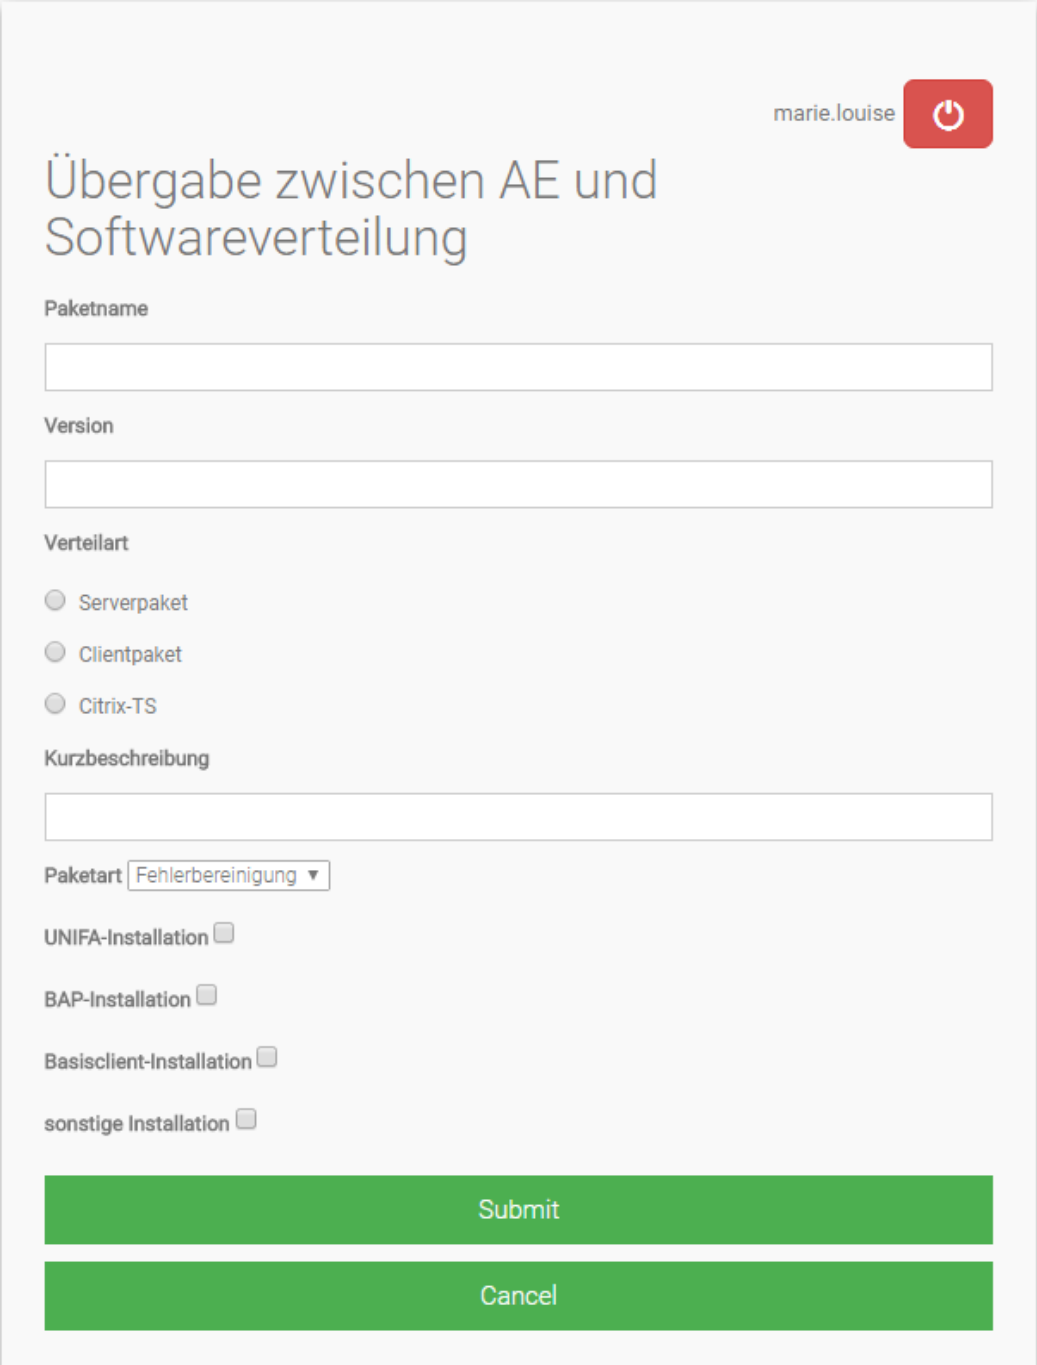


The user enters SVN username and password, the system authenticates the user and test connection to SVN specified in the **"svnkitint.remote.url"**

If success, redirects the user to the form page

If failure, displays error Invalid username or password

3. Commiting to SVN



Packetname is **required** and is the filename

The user fills a form and clicks on submit button, the user inputs are transformed to the following format:

package=test

version=1.0.0

delivery= Serverpaket

comment=this is a test

packettype=Fehlerbereinigung

unifa=false

bap=true

basic=false

other=false

the inputs are saved on SVN specified in the **“svnkitint.remote.url”** in file called “test.properties”

if new file, message “First commit” is used as commit message

if file exists with the same name, message “File changed” is used as commit message

- **Submit button:** submits the form and commits user inputs on SVN
- **Cancel button:** reloads the page and discards user inputs
- **Logout button:** logouts the user

If success, page is reloaded and message **Success!** Your changes have been successfully committed. is displayed

If error, page is reloaded and message **Success!** Your changes could not be committed. is displayed
